Professional Summary

Computer Science undergraduate (B.Tech pursuing) building and operating live production systems on Vercel and Render, with live health probes, maintainer code review, CI/CD and test suites. Open-source contributor: 14 pull requests merged and 8 open across Jenkins, WordPress/Gutenberg, MergeShip, UltimateHealth, RailSync, Termux and other open-source projects (github.com/r1shabhsharma05).

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML, CSS, Bash scripting
Frameworks & Platforms: React, React Native, Next.js, Node.js, Express.js, FastAPI, Prisma, Supabase, Vercel, Render, Docker
Reliability & Operations: Production monitoring with live health probes, incident troubleshooting, deploy debugging, Git, GitHub Actions CI/CD, Maven, Jest and unit testing
Cloud & Networking: AWS (EC2, S3, Route 53, IAM), Linux server administration, DNS, TCP/IP, HTTP and REST web protocols

Projects

SecureGaurd — Security Scanning Platform, Production System secureguard-main.vercel.app
- Built a full vulnerability scanning platform with SAST, API and IaC scanning, SBOM generation (SPDX + CycloneDX 1.6), live NVD threat-intel enrichment and compliance reporting
- Trained a live machine-learning vulnerability classifier on Render on 222 real findings, with a severity ranker (Spearman 0.9446), team RBAC and Razorpay billing

SafeLife — SOS Safety Platform *(React Native, Expo, Node.js)* safelife-ai.vercel.app
- Built a live backend and web app serving real SOS alerts with Telegram delivery, health probes and delivery-retry chains; fixed a stale-build deployment incident and a duplicate-alert fault
- Verified SOS delivery over Telegram live; backend test suite passes 133/133, with an offline queue and retry chain for failed sends

RailSync 2.0 — Railway Maintenance Planning, SIH Team Project *(React.js, FastAPI, OR-Tools CP-SAT)* Sep 2026
- Built a team railway maintenance platform combining AI failure-risk prediction, prioritization and scheduling: github.com/r1shabhsharma05/RailSync
- Integrated 4 railway data sources and automated maintenance-block scheduling with CP-SAT across 40+ timetable entries
- Built a React.js frontend and FastAPI backend with Plan B scenarios, execution feedback and operational visibility

Farmer Marketplace — Full-Stack Web Application *(React.js, Tailwind, Node.js, Supabase)* Team Project
- Built a 2-sided farmer-buyer marketplace with product listings, real-time data management and a responsive interface for browsing, listing and managing products: farmer-market-place-mu.vercel.app

Experience

Software Engineering Job Simulation Oct 2025
JPMorgan Chase & Co. — Forage
- Completed practical tasks in Java, Spring Boot and Kafka integration, including H2 database setup and REST API controller development

GenAI Job Simulation Oct 2025
BCG X — Forage
- Extracted financial data and built an LLM-powered financial chatbot using prompt engineering

Solutions Architecture Job Simulation Oct 2025
AWS — Forage
- Designed a scalable, highly available AWS architecture (EC2, S3, Route 53) with IAM policies, security groups and CloudFormation

Education

GLA University, Mathura
Bachelor of Technology, Computer Science (Pursuing) — CGPA: 6.64/10

Janta Polytechnic, Jahangirabad, Bulandshahr Jun 2025
Diploma in Computer Science — Score: 7.35/10

Certifications

- **Oracle Cloud Infrastructure 2025 Certified DevOps Professional** — Oracle (Oct 2025); **Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate** — Oracle (Oct 2025)
- **AWS Certified Machine Learning - Specialty Exam Prep** — AWS Training & Certification (Oct 2025); **AI Skills Passport** — EY & Microsoft; **JavaScript, HTML5 and CSS3** — Infosys Springboard
